Varilla para Tierra

Varilla de acero con recubrimiento de cobre, bajo especificación CFE 56100-16

varilla para tierra 5/8" X 3 metros con aviso de prueba
varilla para tierra 5/8" x 1.5 metros con aviso de prueba
cuentan con sigla 03

varilla para tierra 5/8" x 3 metros
varilla para tierra 5/8" x 1.5 metros
varilla para tierra 3/4 "x 3 metros
varilla para tierra 14.3 mm de 3 metros
varilla para tierra 14.3 mm de 1.5 metros
varilla para tierra 1/2" x 3 metros
varilla para tierra 1/2" x 1.5 metros
varilla para tierra 1/2" x 1 metro
sin aviso de prueba

Alambre copperweld

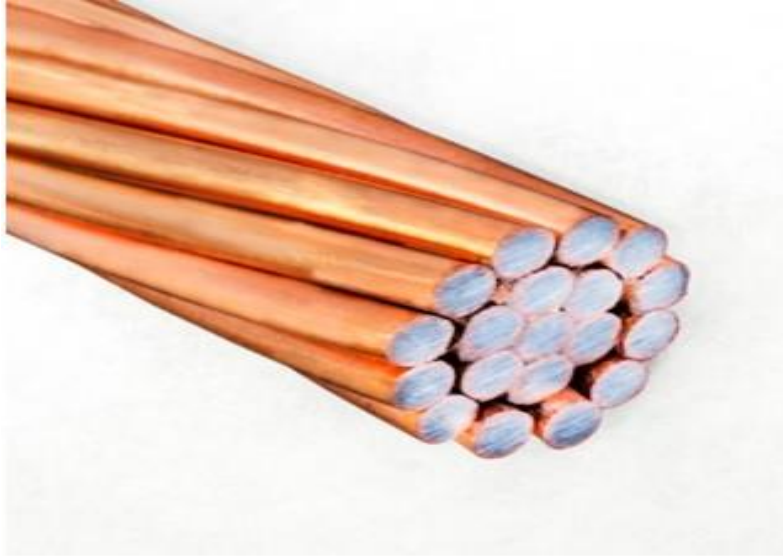

**Alambre de acero con recubrimiento de cobre bajo especificación CFE
E0000-33**

Alambre de acero con recubrimiento de cobre cal 2

Alambre de acero con recubrimiento de cobre cal 4

contamos con sigla 03

Cable copperweld

Cable de acero con recubrimiento de cobre bajo especificación CFE E0000-33

cable de acero con recubrimiento de cobre 7#9

cable de acero con recubrimiento de cobre 7#6

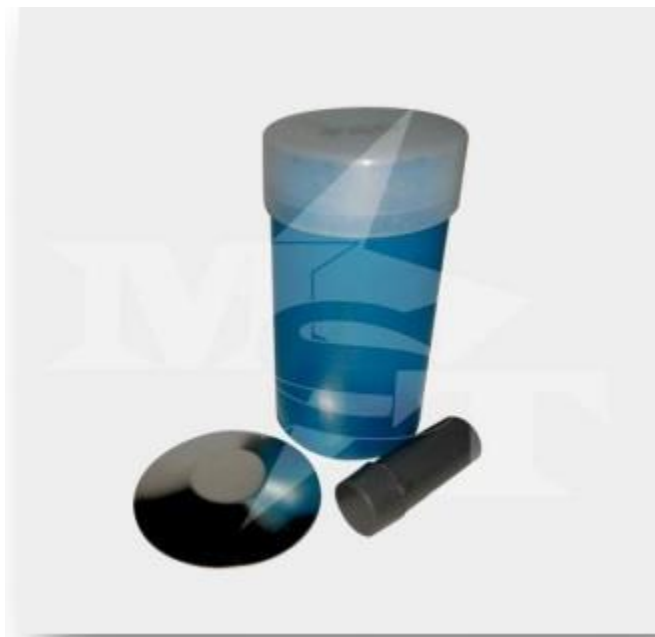

cuentan con aviso sigla 03

Conectores Mecánicos para Varilla

conectores mecánicos para varilla-alambre o cable
en diferentes calidades

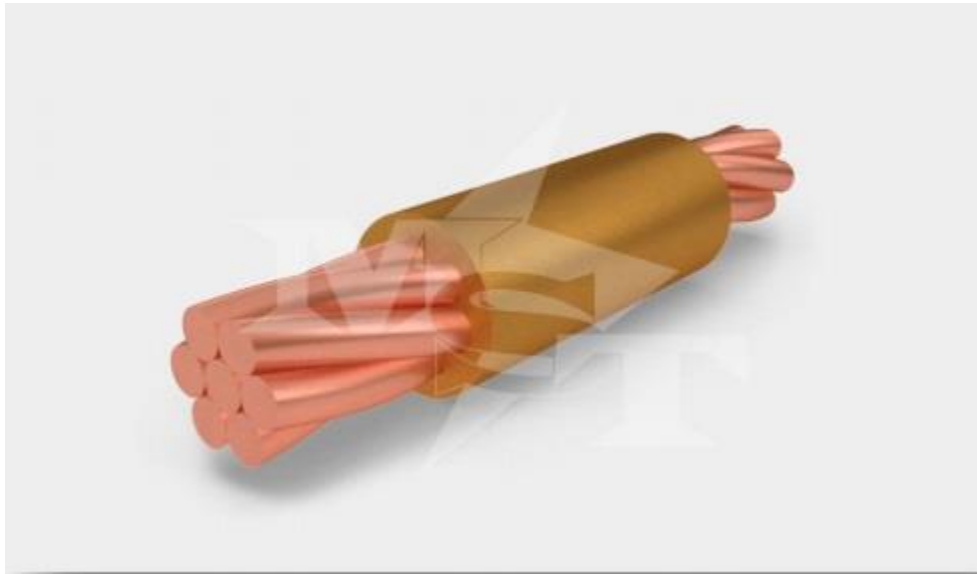

Cargas exotérmicas

ACCESORIOS PARA MOLDES EXOTÉRMICOS

- PINZA DE APERTURA FACIL
- ESPATULA PARA ESCORIA
- CHISPERO PARA ENCENDIDO
- CARDA O CEPILLO DE ALAMBRE
- CEPILLO LIMPIADOR
- MASILLA KG
- SOPLETE
- SUJETADOR DE CABLE

KIT DE ACCESORIOS PARA CONEXIONES EXOTERMICAS (CEPILLO DE ALAMBRE, CHISPERO, BROCHA DE CERDA, GUANTES DE CARNAZA, LIMA PLANA, GOGLES. CAJA DE PLASTICO MEDIANO.)

ACONDICIONADOR DE SUELOS

Es un acondicionador para suelos de alta resistividad, fabricado con materiales de la más alta calidad que le permite realmente alcanzar la conductividad más alta en cualquier sistema de tierras eléctricas.

RESISTENCIA EN OHMS: Menor a 5 OHMS

Libre de mantenimiento y Ph controlado alargando la vida útil del sistema de tierra:

Ventajas del uso del acondicionador

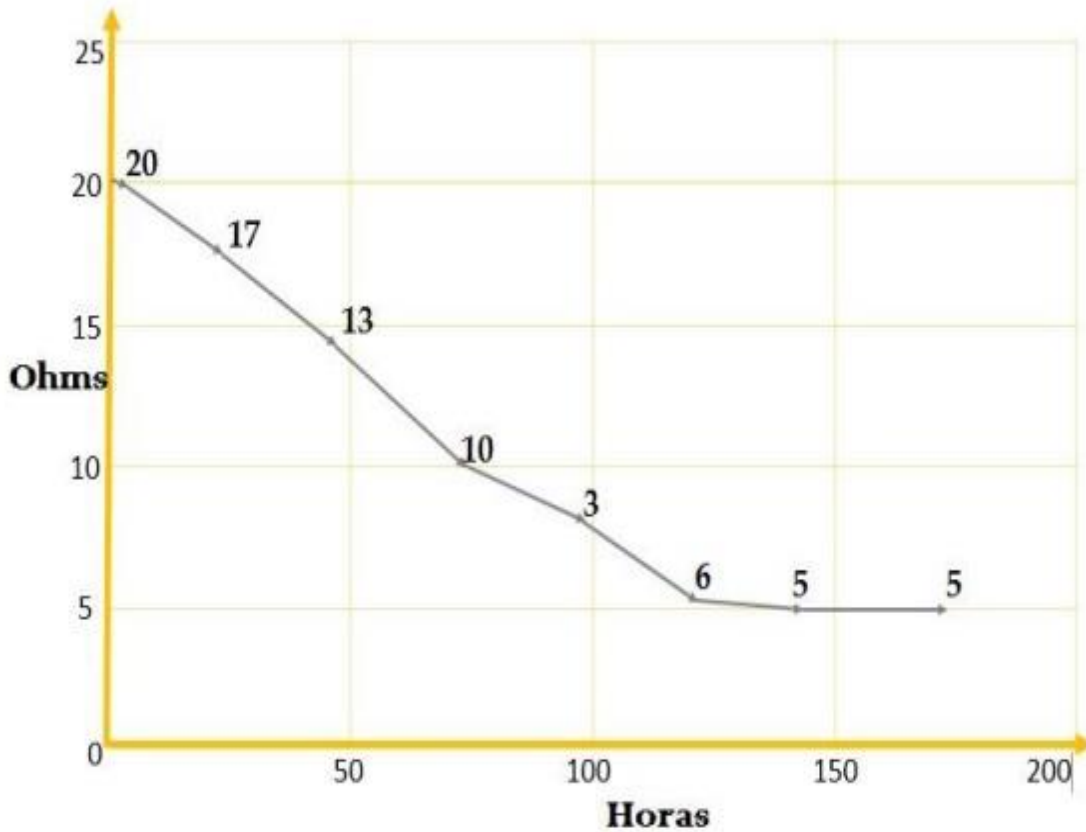

Lectura de 30% a 50% más baja

Vida más larga a cada electrodo

Menor número de varillas

Lectura igualmente constante en frío ó calor en seco ó húmedo

Resistencia

RECOMENDACIONES PARA SU USO

Mezclar en seco el acondicionador a utilizar, ya que durante el transporte por efecto de las vibraciones, que son comunes en cualquier medio de transporte; pudiera eventualmente producirse alguna segregación granulométrica de sus componentes.

Agregar agua limpia en la cantidad necesaria para obtener la fluidez adecuada en cada caso, según las necesidades para cada aplicación sin extenderse de un 60 % en peso.

Vaciar la mezcla en la zanja previamente preparada, si se utilizan moldes para configurar el vaciado del acondicionador esperar, el tiempo adecuado para obtener la resistencia mecánica el cual podrá ser de 48 horas en promedio.

Cuando el punto No.3 ha sido completado, rellenar la zanja con la misma tierra del lugar.
